

LACE THE SHOE

1. Hold T-bar Casing with slot up (Yankz! logo face-down).
2. Leave small loop above Casing.
3. Insert cord ends **from outside Into** top eyelets.
4. Lace cords as shown
Do not lace tightly!
5. Slide foot into shoe...
fit should feel comfortable, but **not tight!**

SECURE LOOP

9. Pull upward on cord loop.
10. Slide T-bar Casing down toward shoe until it stops.
11. Push T-bar into Casing to insure loop position is secure.
12. Pull cord loop downward and secure into "hook" of Toe Clip.

Shoe should slip on and off easily, without having to unlock the system. If you need you to unlock the system, unhook loop from Toe Clip and pull T-bar up to release.

ADJUSTMENTS

If fit is too tight, or loop too short, pull some of the excess cord back through Toe Clip and redistribute the slack by pulling cords up through eyelets toward the ankle.

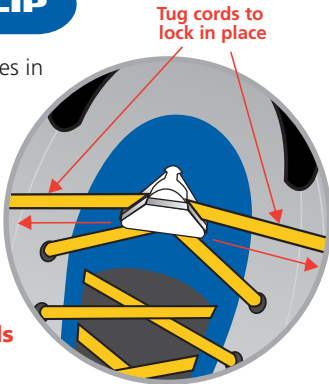

If fit is too loose, or loop is too big, feed cord down from ankle area through Toe Clip.

IMPORTANT TIPS:

 When trimming excess cord at Toe Clip, leave approximately 3" of cord for possible adjustments. Seal to prevent fraying and tuck into sides of shoe.

ATTACH TOE CLIP

6. Insert cord ends through holes in wide end of Toe Clip and pull through side openings.
7. Slide Toe Clip down the cords to the shoe.
8. Tug excess cords **securely** into side notches of Toe Clip to anchor cords.

Do not trim excess cords until final adjustments

Toe clip works facing up or down, it's your preference
